

## Are WE Suppressants?

Whilst educating us on reversing the harm on our environment and the strains of the system, this installation offers an opportunity for the celebration that WATER IS LIFE. Our life systems need water, therefore with the frequency and intensity of rainfall increasing in NI we need to focus on the greenery it helps to produce. A moment to experience these pockets of green can positively influence health and wellbeing. Learning to protect the planet will allow it to flourish and grow for generations to come, rather than exhausting the system which will hinder our very survival.
